Calculating a probability for each of the particles, the probability for a particle indicating likelihood of the potential signal modeled by the particle based upon the received signal; and

Redistributing the particles within a space of potential signals that may be generated by the transmitter based upon the probabilities.

Regarding Claim 10, Bartkowiak and Simeon do not teach, alone nor in combination:

a distribution module operable to determine a set of particles each modeling a potential signal from the space of potential signals and to redistribute the particles within the space of potential signals based upon probabilities for each of the particles; and

a probability module operable to measure a received signal from the transmitter and to calculate a probability for each of the particles, the probability for a particle indicating likelihood of the potential signal modeled by the particle based upon the received signal.
